

## Ground loop

### What is it and how to fix it

High-end audio products can be subject to ground loop in homes or areas where the mains power, home wiring or system wiring is less than ideal. Ground loop may create a buzz in the system. These problems can be easily fixed by dealers/installers taking the time to understand the problems and teaching their staff how to prevent / fix them. By taking time to read the following links, you can prevent wasting a huge amount of time and money on such a simple problem.
